OVERVIEW

PURPOSE AND SCOPE

The main purpose of this software API is to provide a convenient way of accessing student-based database. Using these API calls, the user can insert and update data for students, courses and course instructors.

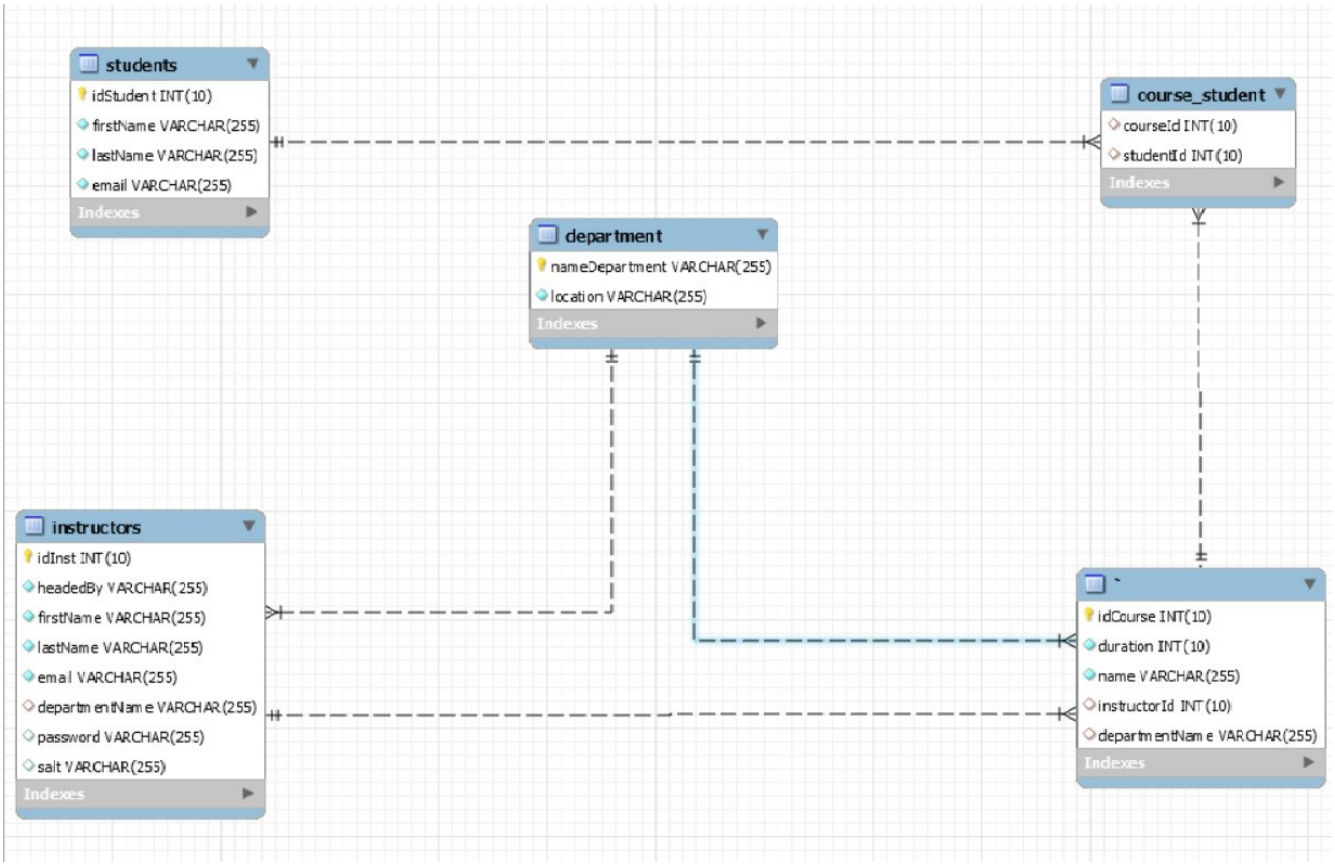

The user can insert, update and delete data for certain allowed not restricted API data such as, course instructors and students.

- Node (Express.js)
- Database – MySQL
- Javascript
- ECMASCRIPT
- Eslint, babel, flow
- ER diagrams

Goals and Objectives

- Controlled access to the database
- API to retrieve data for students and which courses they enrolled
- Data management and error handling
- Using JSON objects for communication to and from the API

Relational database model

Software deliverables

These items will be available to the customer:

1. Source code for the server side of the software
2. User's guide
3. API documentation
4. Test cases

Software constraints

1. User cannot delete a course, once it is created
2. Different departments cannot have the same name

Success criteria

- Pass rate on the presentation by the jury
- Delivered by 31.09.2019
